Videtrac[®] Tape Replay and Copy System

® Videtrac name registered to Metropolitan Police Service

ClearView Communications introduce the Videtrac range of replay systems designed for processing CCTV surveillance video tapes.

The systems enable VHS and SVHS single camera or multiplexed tapes to be decoded and displayed in real-time or in time lapse to 960 hours.

Replayed video or specific still images may be processed and enhanced before duplication onto copy tapes, printing or downloading to floppy disc.

Software upgrade and extended warranty contract available

Features and Benefits

Equipment housed in robust case with optional door

Handles SVHS/VHS tape, formats at speed down to 960 hours

Decodes multiplexed tapes, including encoded time and date

Displays images in full or multi-screen mode

Tape duplication using industrial machines

Still image printing using high definition roll printer

Still image download to floppy disk

Live and still image zoom (from 1.5x to 8x) and freeze

Variety of system designs accommodate individual requirements
