Cell Camera — CVH

Features and Benefits

Cell cameras with no ligatures points and maximum vandal resistance

Colour/monochrome IR cameras providing pictures in complete darkness

Inbuilt "black" infra red illumination option

Can be integrated with existing custody desk and area recording systems

Option for audio monitoring and/or two way audio intercom facilities

Covert or overt camera options

Display of live and relayed images by authorised operators only

Provides the highest quality of video tape recording

Closed circuit (CCTV) technology is increasingly being utilised as a tool for recording and monitoring police and prison cells to provide an enhanced level of care, whilst allowing transparency of police treatment of prisoners.

Cell Cameras

Cell Cameras

ClearView Communications have installed their cell ligature-free cameras with many police forces requiring coverage of vulnerable cells and for recording all cells within a single custody suite.

The cameras are provided in specially designed "cell" housings and are available as colour/mono 580 TVL or colour 480 TVL options. Both types have a 2.6mm auto iris lens. There is an infra red option available that is capable of producing video pictures in complete darkness. This leaves the cell in complete darkness at night as far as the prisoner is concerned, but provides bright illumination for clear camera pictures. The cameras provide a complete view of the cell which includes the area directly under the camera itself.

The cameras are designed with no sharp protruding objects or ligature points and provide the highest level of vandal resistance.

Optional Masks

To protect the privacy of prisoners, an optional video mask facility is available to cover the wc area. The area of mask may be set according to the size and position necessary for it's purpose. This system must be purchased in addition to the camera as it is a stand alone unit.

Optional Audio

Optional high sensitivity microphones may be built into the camera housing. These do not require batteries or separate mains supplies. They will pick up all sound within the cell.

An optional facility is also available to allow the custody sergeant to communicate with each cell via a telephone handset at the charge desk. A two - way conference can therefore be held between the desk and cell.

If you are interested in this option please contact ClearView Sales Department.
