Public Sector Security Solutions Newsletter

From Conception to Commissioning

Our surveyors, design engineers and commercial department can provide all aspects of support required by Councils. From an accurate and timely response to tender, through to on site project management and commissioning.

Our design department will provide site and schematic drawings, and full technical specifications, in a detailed proposal for each project.

Our commitment to the security industry is second to none. Our solutions provide design and build savings, without compromising the quality or performance of the installation. This leads to improved efficiency and enhanced margins.

Through our qualified Project Managers utilising the PRINCE 2 TM (Projects in Controlled Environment) methodology, we deliver consistently high levels of performance ensuring projects are completed to budget and on time whilst meeting customer expectations and contractual obligations.

We recognise that a project is not complete until it passes our rigorous commissioning process, followed by handover and acceptance procedures. This process is managed by our team of dedicated commissioning engineers and project managers.

Newley Nacoss-ed!

ClearView Communications have recently been awarded the coveted NSI NACOSS Gold accreditation.

The addition of NSI Gold compliments approvals including ISO9001, BSIA CHAS, FIA and Investors in People already achieved. These emphasise the company's continued investment to ensure we remain one of the UK's premier integrated security suppliers.

Intelligent Moving Camera (IMC) CCTV

Crimes and anti-social behaviour often take place where cameras are not pointing, yet evidence needs to be captured to ensure a successful prosecution is made.

The revolutionary IMC camera, driven by Viseum software, removes the problem of incorrect camera position missing the "action". The system works using a combination of fixed cameras for 360 degrees of cover and a high performance PTZ camera for close-up tracking. IMC offers the unique combination of unmanned surveillance and powerful deterrent in a simple, yet multi-application, installation package.

The Met Police have recently taken delivery of their IMC systems which have already led to prosecutions.

More Councils take to the Airwaves!

Councils are realising the benefits that can be achieved by using a wireless network to transmit and record cctv.

These benefits apply to rural and town centre systems and are why Welwyn, Thurrock, Gorleston, Basildon, Wickford, Bedford Billericay, Fenlands, Hatfield, and Cricklade Council all instructed ClearView to design, install and commission a system using high performance wireless digital transmission and recording technology.

ClearView have reference sites and case studies that clearly illustrate the use of the latest technology such as IMC- Intelligent Moving Cameras, Megapixel cameras, digital recording and video analytics, and are able to use this expertise to design systems that are future proof, cost effective, but above all, proven.

Fenlands go Digital!

Fenlands Council had a need for a CCTV system.
Simple I hear you say!

In most instances you would be correct, however, the rural expanse that needed to be covered made a conventional cabled solution commercially unviable.

The Council contacted ClearView who are the UK's market leader in the design, installation and commissioning of high performance digital transmission and recording technology.

After an initial meeting it soon became apparent that the only solution would be a digital wireless system. High resolution pan, tilt and zoom cameras each with a small low power antenna were positioned onto lamp posts or dedicated bracketry to cover the areas of interest.

Recorded images are transmitted to the central control and monitoring room. Here, each camera view is controlled and adjusted with the commands being transmitted back to the camera via the wireless network.

The system has enormous flexibility as cameras can be re-sited using the existing wireless network and additional cameras can be added as the need arises.

Bedfordshire deploy the redeployable!

Bedfordshire Council had a similar problem to Fenlands Council i.e. a need for a CCTV system. However, there the similarity ends.

The geographical landscape of the area to be monitored was completely the opposite. Rather than open landscape between populated areas it is densely populated built up real-estate.

A solution was needed that would enable the cameras to be redeployed quickly and easily throughout the Borough. They issued a competitive tender for their requirement which ClearView won.

Flexibility, was the key. Each camera would have the facility to be attached to standard street furniture (i.e. lamp post) and draw its power from this.

Instead of a network of transmitters and receivers, the recoded images would be stored direct to a high performance digital recorder housed within the camera base cabinet.

Viewing the recoded images is possible via three options for added flexibility. Local to the camera via a laptop and wireless connection, remotely via a 3G connection or retrieval of the hot swappable hard drive.

Camera view can be adjusted via the laptop or 3G connection.

Compact and Bijous?

No, compact and see you.....!

ClearView have recently designed and built 4 parking enforcement CCTV camera recording systems, housed within a Smart Car.

Each car has a high performance pan tilt zoom camera mounted to a hydraulic periscope that extends to 3 mtrs above roof level.

Inside the cabin is a mini joystick controller and a high performance digital recorder where recordings can be downloaded and viewed.
