Education Sector Security Solutions Newsletter

ClearView Communications design, manufacture, install and distribute a range of high performance security equipment and systems for clients around the world.

Added value - through partnership

When it comes to protecting your premises, staff and pupils 24/7 365 days a year, there is no better way to achieve this than installing a high performance CCTV system.

“High performance does not necessarily mean high cost “ explains Andy Lockett, Sales Support Manager at ClearView.” If you listen to your customer, understand their needs, have a strong technical understanding of security products and the installation process, there are many ways to provide a high performance digital solution that do not cost the earth” Lockett continues “things are tough at the moment, and you need a solution that *adds value*”.

What do I mean? Provide a solution that does not restrict the user to a set number of camera inputs, but a solution that can incorporate access control, cashless vending, intruder alarm etc. It is these *added value* benefits that will ensure you partner with your customer rather than remain just a supplier. This technology and partnership strategy is, I believe, the only way forward, and ClearView have invested heavily in personnel, procedures and strategic supply partners to ensure we remain one of the UK’s premier integrated security providers.

IV provide IP to CVC!

ClearView Communications, in partnership with IndigoVision, a world leader in the provision of IP security solutions that include mapping and video analytics, have recently installed security systems at Summerhill School and Sacred Heart both in Barnet, Hockerill College in Essex and Kingsdale school Southwark plus many other educational facilities that required more from their security system than a conventional closed circuit system could provide.

DVR or NVR - know the difference?

Why not call the experts?

ClearView have Sales Engineers who are Microsoft Certified and have a career background in the Education IT sector.

This wealth of IT and education facility networks experience, combined with industry recognised TAVCOM Security Training will ensure we can answer all your questions and design, install and commission a system that compliments your existing infrastructure.

It’s good to Network

Nearly all educational facilities have a computer network cabled throughout each building, with multiple buildings linking back to the main IT server. ClearView can utilise this infrastructure to install a high performance IP CCTV and integrated security system.

This has distinct advantages over conventional solutions that require dedicated cables installed since the cost to install this cable is removed and the installation time reduced.

Another advantage is that security becomes part of the school’s infrastructure rather than a separate entity. This enables anybody (with access rights) to view CCTV, control and monitor access points such as doors barriers, alarms, video entry and call points.

Case study "Snapshots".

Primary / Junior Schools Millhouse Junior and Primary School

Both sites had been suffering from poor image quality and system failure due to changes made by various contractors without improvements to the cabling. ClearView were asked to complete a site survey, make recommendations and implement them. This was carried out to the complete satisfaction of the school.

Secondary School James Hornsby School

After spending considerable amounts of money on a digital CCTV system, the school realised it was almost useless. Constantly failing and with no support from the supplier, they asked ClearView to provide a solution. ClearView delivered to the complete satisfaction of the Head Teacher and IT Department.

IP CCTV Highams Park School

A security solution that could integrate with other aspects of the school's security system was the brief issued by the customer. The solution - an IndigoVision IP and NVR system. IP cameras with PoE - Power over Ethernet - were installed and images streamed over the school's network to an IndigoVision NVR - Network Video Recorder. This type of system is an` end to end` solution and is network bandwidth efficient, robust, secure but also fully expandable. 31 days storage and off site 24/7 site monitoring are other benefits of the IP security solution.

University Magdalene College

Magdalene and St Mary dates back to the year 1428. Many educational facilities require a security solution that is sympathetic to the building, whilst still providing a high level of security. Magdalene had a requirement for CCTV and access control that would meet this exacting criteria. The solution provided was a digital IP system that could be added to the school's existing network. It incorporated NVR Network Video Recorders and high performance PTZ - pan, tilt, zoom dome cameras with built in IR lamps.

Its good to talk!

ClearView can now install digital recorders that activate a voice message direct to the camera that has detected movement. This can be a powerful deterrent to those attempting to commit crime. Any message can be recorded such as,

"You are now being monitored please leave the school grounds."

Or, a more public message such as "This car park area is monitored by CCTV"
