

"ClearView Communications design, manufacture, install and commission high performance integrated security solutions for clients around the world."

## ClearView appointed UK distributor for Scyron products

ClearView are delighted to announce the exciting news that they have been appointed UK distributor of the Scyron product range. Scyron's software - including systems for video masking, CCTV decoding, analytics and presentation - complements ClearView's existing comprehensive forensic offerings. The DEMON range of desktop and video management products strengthens our position as market leader in this field. We would be delighted to discuss this new development with you and demonstrate any DEMON systems of interest.

## GateREG: New Affordable Advanced ANPR

Up until now, Automatic Number Plate Recognition (ANPR) has not been viable for use with site visitor management and access control due to its high cost and technical complexity. However, with the introduction of ClearView's New **GateREG** Visitor Management System, clients can use vehicle registration data as a basis for site visitor management to provide email or SMS notification of visitor arrival, comprehensive recording of all vehicle site activity and control of barriers.

Between one and four ANPR and overview cameras can be connected to a single controller which can have a LAN/WAN/3G IP interface.

## ClearView's Integrated Security Management System

ClearView's Integrated Security Management System (ISMS) is being used by public and private sector organisations around the UK to manage all physical and electronic security disciplines via a single Graphical User Interface (GUI).

In addition to monitoring and reporting traditional security systems like CCTV, Access Control, PIDS, Intercom, ANPR and Fire, the system also monitors IT and peripheral equipment including servers, switches, UPSs and power supplies.

All devices and alarms are displayed on multi-level mapping screens with all operator actions recorded in an audit log. Events, alarms and status reports are also recorded and transmitted using Microsoft Outlook. Management and service staff alike can therefore be confident that they always have the up-to-date information they need-whether it be notification of a security breach, or that a UPS battery cell has failed.

## More Force-wide Digital Custody Suite Upgrades

ClearView have been contracted by several more police forces recently to provide digital audio-visual recording systems for custody suites. These include Metropolitan, Hertfordshire, Sussex, Northamptonshire, Cambridgeshire, Surrey, City of London and Wiltshire. All contracts were awarded after competitive tender.

The systems provide privacy masking and real-time "lip-sync" video and audio recordings of critical areas such as charge desks and intoximeter rooms. In addition to CCTV, ClearView have provided all electronic security systems to the suite including intercom, panic & affray alarms, access control, locks and TV distribution. Most systems run over Cat5/6 cables making design and installation easier.

## COUNT Spectacular

Being able to accurately count people using public areas and knowing when the facility is busiest is a major task in the management of shopping centres and major sporting venues. Unique features include:

- Gathers accurate data from only a single camera
- Can be integrated with existing cameras
- Allows bi-directional people counting from multiple camera views.
- COUNT results to be displayed graphically or exported to third party Windows software

## Indulge in a facial!

The Face-R facial recognition system has been installed at the Den Haag football stadium in the Netherlands to control access for all season ticket holders to the ground.

The system can isolate faces from video images and digitize them into metadata.

Metadata points are placed on eyebrows, eyes, nose and mouth. The face can then be compared with the (black and white lists) when a match or mismatch event can be created. Besides comparing face prints with the person, risk profiles can be programmed to detect people returning within a pre-defined period.

## DigiBase – CCTV Image Databasing

ClearView has launched an image databasing software application called “DigiBase”. It has been designed to help organisations store, categorise, display and search large numbers of video and still images.

Police and local authorities often need to store thousands of video clips and stills of both known and unidentified persons. DigiBase can search thousands of image files, for example, “male wearing red Nike baseball cap and black trainers” in less than a second,

displaying all matching images on screen together. DigiBase is available as a stand-alone application or may be added to ClearViews decoding systems including Intelimux and DigiVue.

## NEW CCTV Footage Download Service

ClearView's analogue tape and digital CCTV replay systems are in use by all UK police forces. Over 1,000 systems are deployed around the UK. We have developed software for automatically decoding virtually all analogue multiplex and digital CCTV formats.

We are now offering our expertise in the form of on-site engineer response to police forces, councils, legal firms and commercial organizations requiring download, duplication or compilation of CCTV footage for evidential purposes. Attendance can be provided on a one-off 4-hour or next working day call-out response, or via a 24/7 contract as required.

## NEW TransView - Vehicle CCTV

ClearView has launched TransView – an advanced range of Mobile Digital Video Recorders (mDVRs) designed for use on board vehicles. The systems can record and transmit a wide variety of live data including CCTV, tachometer, alarms, audio and horizontal/vertical sensing.

Multiple feeds can simultaneously transmit over 3G and WiFi networks to provide vehicle location, CCTV and other data to a central monitoring station giving real-time and retrospective information. The vibration-absorbing mDVRs have built-in GPS for location tracking. TransView can provide aeroplane-style "black box" recordings so that in the event of an incident or fire, evidence can be retrieved for analysis. The systems are currently in use by bus, taxi, rail and logistics operators.
